

Milestone Systems

XProtect® Smart Client

Demand perfection

Providing a unique combination of control, efficiency and adaptability, the Milestone XProtect Smart Client continually sets the standard in IP video management software (VMS). Designed for Milestone XProtect IP VMS platforms,* the XProtect Smart Client is an easy-to-use client application with superior features for ultimate surveillance control. Simply put, it perfects your installation.

Unparalleled usability

The flexible camera views featured in the XProtect Smart Client provide seamless access to live and recorded video, while integrated event and device control provides surveillance operators with an extremely efficient working environment. Additionally, synchronized playback and Smart Search functions enable accurate and efficient investigation of incidents with easy export of evidence material.

*Functionality of the XProtect Smart Client is determined by the specific XProtect product platform

The Milestone open platform is your foundation for success

Milestone is the world's leading provider of open platform IP video surveillance software. XProtect is designed with open architecture that allows for integration with the widest choice of network video and computer hardware. XProtect products interface with more than 1,000 IP cameras, encoders and digital video recorders (DVRs) from almost 100 different manufacturers. Committed to providing a true IP video open platform and freedom of choice, Milestone is proud to be among the first VMS vendors to support and lead the future progress of ONVIF and PSIA standards.

The open platform lets you optimize your security installation with today's and tomorrow's best-in-class solutions because hardware is decoupled from software. By integrating IP video with multiple security systems and video analytics, you gain true value-adding efficiency and expand your capabilities.

Developed by the world's leader in IP VMS, the XProtect Smart Client perfects the security operation by providing:

- **Control:** Instant control of cameras, connected devices and other system components with overlay buttons
- **Efficiency:** Security operators can quickly investigate and extract evidence with the Sequence Explorer
- **Adaptability:** The user interface is easily customized according to skill level and work tasks, reducing training costs

The Open Platform Company

Perfecting your security operations

Powered by XProtect IP VMS platforms, the XProtect Smart Client is the operator tool used to view and control cameras. It provides instant access to live cameras or recorded video and presents up to 100 cameras in a single view. Cameras are easily controlled through integrated pan-tilt-zoom (PTZ) control and digital zoom. Integrated devices and systems can be intuitively controlled through either the overlay buttons or XProtect's state-of-the-art mapping function. Now the XProtect Smart Client also comes with support for 64-bit operating systems to enhance system performance.

Find and create evidence fast

Searching through extensive recordings to find a specific incident can be very time consuming. But XProtect Smart Client provides advanced features such as Smart Search, Instant Playback and Sequence Explorer to investigate incidents as they happen while simultaneously analyzing recorded video material.

Customized to meet user's needs

Proven in more than 100,000 installations worldwide, the XProtect Smart Client fits the needs of a wide variety of customers. Available in 26 languages, it significantly improves productivity by removing the language barrier. Additionally, the latest version lets operators modify the application so it aligns with their specific skill level and needs.

Plug-in functionality for enhanced usability

The XProtect Smart Client also enables integration of applications and systems into the software*. Using the Milestone Integration Platform plug-in capability, Milestone Solution Partner (MSP) solutions and other business and security applications can be embedded directly into the XProtect Smart Client. This provides a unified working environment because applications used on a daily basis, such as access control and point-of-sale (POS), can be integrated into the XProtect Smart Client. An integrated system in which all controls are readily available is more efficient and easier to operate and requires less training for new personnel.

The XProtect® Smart Client – Player is a new video viewer for exported material from XProtect VMS systems. It has the same familiar and user-friendly interface as the XProtect Smart Client, so viewing exported video is more intuitive. With XProtect Smart Client – Player, viewing and collecting video evidence is easier than ever with features such as:

Instant one-click playback enables easy viewing of exported video evidence.

Advanced second-level investigation tools make it even easier to gather evidence. Authorities can conduct investigations easily and quickly refine exported video by selecting the most essential video evidence for re-export.

The project tool allows users to merge video exports or archives from two different locations or XProtect systems together into one new export, simplifying the evidence-collection process.

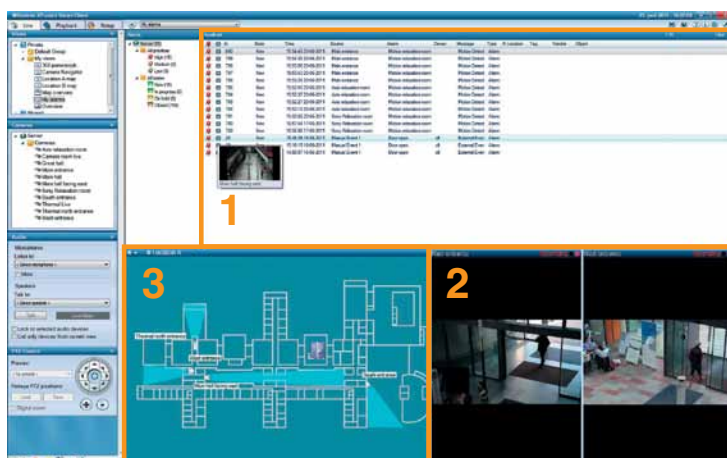

Complete overview of incidents improves response time

The Alarm Manager has powerful features, giving a complete visual overview of all alarms in an installation.

As seen in the screenshot, the alarm list (1) is a prioritized list and overview of alarms from all security and alarm systems. Operators can flag the most important alarms and easily manage high quantities of alarms by dismissing false alarms.

The camera preview (2) immediately shows the video feed of the camera that is associated with the alarm. It enables operators to easily assess the validity of alarms and cancel false alarms.

The map function (3) visually places all the cameras in an installation on a map. When an alarm sounds, the camera is highlighted on the map, making it easy to precisely locate the alarm's location.

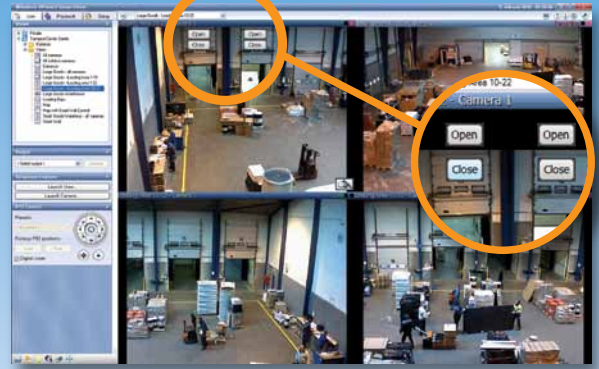

The XProtect Smart Client makes complexity simple

Easily examine recordings with the playback function

The XProtect Smart Client's playback functionality is easy and intuitive to use with large control buttons for video playback and browsing. Recordings can be played back from all cameras in the view or from one or more cameras, allowing the operator to compare recordings from different time periods and quickly detect inconsistencies.

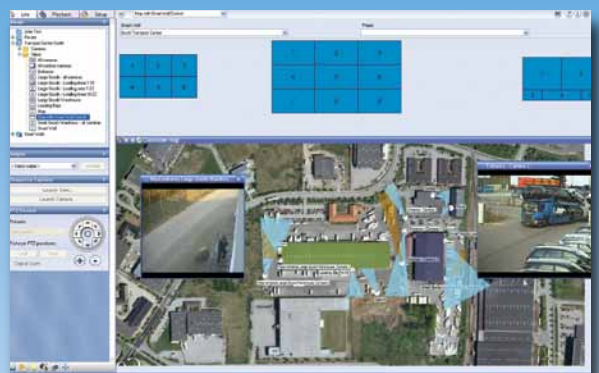

Improve response time with integrated controls

Control of external system devices such as speakers, lights, gates and input/output devices is easier than ever with the overlay controls. Appearing as overlay buttons when mousing over a particular camera, the buttons provide an intuitive and logical working environment that improves response time.

Sequence Explorer brings the security industry an exceptional level of usability

The innovative Sequence Explorer provides intuitive navigation of bookmarks, captured video and time sequences from one or multiple cameras, enabling accurate and fast investigation of incidents and evidence extraction. The Sequence Explorer is smooth to navigate with a sliding preview and "drag-and-throw" function for video thumbnails. The Sequence Explorer seamlessly connects to live and playback modes of the XProtect Smart Client.

Complete situational awareness

The XProtect Smart Client also integrates seamlessly with XProtect® Smart Wall for XProtect Corporate, an advanced video wall product that provides an ultimate overview of large surveillance installations. It simplifies management of complex sites, and layouts are easily populated by dragging and dropping cameras into the monitor views.

The XProtect Smart Client also includes a state-of-the-art mapping function that portrays the entire surveillance installation in interactive, multi-layered maps. The map function has intuitive navigation with clickable hot zones, quick camera preview by "mousing over" them and real-time displayed updates of system components.

"Milestone is simple to use. With no training I was able to use it immediately - very intuitive. When there is an incident, the security team can access the video footage quickly with a non-stop flow of evidence from camera to camera. The software is well thought out and designed, easy to configure, maintain and use. It really is a great piece of technology."

The Open Platform: a foundation for long-term success

Milestone XProtect acts as the powerful core of surveillance systems, providing the widest choice in third-party hardware components and integration with other business systems. It is the foundation enabling you to cost effectively choose the best solutions for today and tomorrow.

The Milestone Integration Platform Software Development Kit (MIP SDK) enables integration of applications and systems into XProtect software. The open architecture of XProtect, together with the MIP SDK allows for endless possibilities to add features and functionality for creating powerful, new surveillance solutions.

About Milestone Systems

Founded in 1998, Milestone Systems is the global industry leader in open platform IP video management software. The XProtect platform delivers powerful surveillance that is easy to manage, reliable and proven in thousands of customer installations around the world. With support for the widest choice in network hardware and integration with other systems, XProtect provides best-of-breed solutions to 'video enable' organizations – managing risks, protecting people and assets, optimizing processes and reducing costs. Milestone software is sold through authorized and certified partners. For more information, visit: www.milestonesys.com
